PROFESSIONAL SUMMARY

Senior Software Engineer with 15+ years of backend and full stack experience, focused on **distributed systems**, **microservices** and **event-driven architecture** with **Node.js, TypeScript, PHP/Laravel, Apache Kafka and AWS**. I work from architecture to deployment, with experience handling high data volumes and acting as the technical reference for architecture.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, PHP 8, Java, Go, SQL

Backend: Node.js, Express.js, Laravel, Spring Boot, REST APIs (RESTful), GraphQL

Architecture and messaging: Microservices, event-driven architecture, Apache Kafka, RabbitMQ, AWS SQS, EventBridge, Step Functions, Saga pattern, idempotency, retry with backoff, DLQ

Databases and search: PostgreSQL, MySQL, MongoDB, DynamoDB, Redis (cache), Elasticsearch

Cloud and DevOps: AWS (Lambda, API Gateway, EC2, S3, DynamoDB), serverless, AWS SAM, Docker, CI/CD, GitHub Actions, LocalStack, DigitalOcean, Linux, Git

Observability and reliability: AWS CloudWatch, AWS X-Ray (distributed tracing), SLOs, chaos engineering

Frontend: Vue.js, React, HTML5, CSS3

Data and AI: Apache Airflow, dbt, ETL, data pipelines, LLMs, AI agents, MCP (Model Context Protocol), GitHub Copilot

Quality, security and agile: Unit and integration testing, Jest, PHPUnit, Larastan, DevSecOps (Semgrep, Gitleaks, Checkov, OWASP ZAP), Clean Code, SOLID, Scrum, Kanban

PROFESSIONAL EXPERIENCE

PHP / Laravel Developer | Hammer Consult

06/2023 - Present | Remote

- Build applications in PHP 8, Laravel and Vue.js for distributed systems with high data volumes.
- Implement Apache Kafka messaging to asynchronously process events from every court district in Minas Gerais.
- Store and index large data volumes with MongoDB and Elasticsearch for fast searches over extensive datasets.
- Apply Redis caching strategies to reduce latency and load on high-demand applications.
- Created MCP (Model Context Protocol) servers that automate processes and drove the daily use of GitHub Copilot across the team.

Senior Full Stack Developer | DigiFarmz

03/2021 - 04/2023 | Remote

- Technical reference for the architecture of an agtech platform that monitors more than 1.5 million hectares of soy, including 500 thousand hectares in Paraguay.
- Designed and built microservices and RESTful APIs in Laravel and Node.js, with Vue.js and React frontends.
- Implemented asynchronous communication between distributed services with Apache Kafka topics.
- Built CI/CD pipelines that **cut rollbacks by 90% and raised release quality by 20%**.
- Led deployment, scaling and monitoring of production applications on AWS.

Backend Developer | Data Cempro Software

07/2017 - 01/2021

- Built and evolved critical ERP modules in PHP, Java and JavaScript, with direct technical support to clients.

Backend Programmer | F1 Soluções

10/2015 - 06/2017 | São Leopoldo, RS

- Built backend APIs and applications in Node.js and CakePHP and optimized high-performance MySQL databases.

Full Stack Programmer | SPOT Monitoramento e Tecnologia

03/2014 - 10/2015 | Porto Alegre, RS

- Built web systems in Java, JavaScript and PHP, integrating external APIs, in an engineering team of more than 100 people.

Earlier experience (2007 - 2014)

Web/Java Developer at N2 Agência Web (2013 - 2014) and XHarbour Developer at SYGECOM (2009 - 2013) and at Data Cempro Software (2007 - 2008), in Porto Alegre, RS: web systems in PHP and JavaScript and business management systems in XHarbour and Webspeed.

PROJECTS

- **Distributed Systems Playground (live on AWS):** Serverless e-commerce with 5 microservices in Node.js, AWS Lambda and DynamoDB. Saga pattern on Step Functions with compensation, idempotency, EventBridge with DLQ, chaos engineering and SLOs (p95 under 2 s, 99.5% of sagas completed or compensated). AWS SAM, X-Ray and DevSecOps (Semgrep, Gitleaks, Checkov, OWASP ZAP). leandrohuber.freeddns.org/laboratory | github.com/Leandrodasilvahuber/lab_dist_system
- **HüberClaude (open source):** AI coding agent for the Linux terminal integrated with OpenRouter: a single API key gives access to thousands of AI models (LLMs) with pay-per-use pricing. leandrohuber.freeddns.org/huberclaude
- **Fuel Price Observatory (live):** Data pipeline (ETL) that publishes a map of gasoline, ethanol, diesel and CNG prices by Brazilian state, updated automatically every 10 days with open data from ANP, for about US$ 2.60/month. Apache Airflow, dbt and AWS Lambda. leandrohuber.freeddns.org/gasolina
- **Maya, AI English tutor (live):** LLM application that leads conversations in English and corrects mistakes with explanations in Portuguese. Go backend with React embedded in a single binary, in a Docker container on AWS EC2. leandrohuber.freeddns.org/teacher
- **James Tip (featured on Shark Tank Brasil):** One of the developers of the AI that identifies consumption patterns and forecasts sales to optimize retail inventory; the product was pitched on Shark Tank Brasil and closed an investment round.

EDUCATION

Associate degree in Systems Analysis and Development | UNIASSELVI | Completed in 2025

COURSES AND CERTIFICATIONS

DL Training - Development & Leadership | INEXH - Instituto Nacional de Excelência Humana | 08/2020

LANGUAGES

Portuguese: native | English: basic (A2), with technical reading of documentation
