PROFESSIONAL SUMMARY

Senior software engineer with 15+ years of experience, focused on distributed systems: microservices, messaging, cross-service consistency and production operations. I architected Kafka integrations that process events from every court district in Minas Gerais and microservices for a platform that monitors more than 500 thousand hectares of soy.

In my public lab on AWS — with a live demo — every purchase is a saga with automatic compensation, end-to-end idempotency and measured SLOs, and I inject failures on purpose to prove everything recovers. Retries, backoff, DLQs and the 3 a.m. alarm are part of my daily routine.

FEATURED PROJECT · RUNNING IN PRODUCTION ON AWS

Distributed Systems Playground — 5 services, saga and chaos engineering

▶ **Live demo:** www.leandrohuber.freeddns.org **Code:** github.com/Leandrodasilvahuber/lab_dist_system

- 100% serverless e-commerce with five independent services (Products, Orders, Payments, Stock, Saga), each with its own DynamoDB tables (**database per service**).
- Purchase modeled as a Step Functions saga: CreateOrder → ReserveStock → ProcessPayment → CommitReservation → ConfirmOrder, with reverse-order compensation and reconciliation of stuck sagas.
- **End-to-end idempotency** (Idempotency-Key, conditional and transactional writes), domain events on EventBridge with Archive for auditing, and DLQ with redrive.
- **SLOs defined** (p95 < 2 s; ≥ 99.5% of sagas completed or compensated), latency, throttling and failure injection per service, and a cost kill switch with AWS Budgets.

TECHNICAL SKILLS

- **Distributed patterns:** microservices, event-driven architecture, Saga (orchestration and compensation), idempotency, retry with backoff, circuit breaker, DLQ and redrive, database per service
- **Messaging & orchestration:** Kafka, RabbitMQ, AWS EventBridge, SQS, Step Functions
- **Distributed databases & NoSQL:** Cassandra, DynamoDB, MongoDB, Neo4j, Redis, ElasticSearch
- **Relational databases:** PostgreSQL, MySQL
- **Cloud & infrastructure:** AWS (Lambda, API Gateway, DynamoDB, CloudWatch, X-Ray, Cognito, S3, CloudFront, Budgets), AWS SAM, Docker, LocalStack, DigitalOcean, GitHub Actions, CI/CD
- **Observability & reliability:** structured logs, EMF metrics, distributed tracing (X-Ray, correlationId), alarms, SLOs, chaos engineering
- **Languages:** Node.js, TypeScript, PHP (Laravel), Java (Spring Boot)
- **Security:** Cognito/JWT, Semgrep, Gitleaks, Checkov, OWASP ZAP
- **AI-Assisted Development:** GitHub Copilot, MCP (Model Context Protocol), Prompt Engineering

PROFESSIONAL EXPERIENCE

Senior Full Stack Developer | Hammer Consult — 06/2023 – Present

- Architected Kafka integrations for high-scale asynchronous event processing, supporting data from every court district in Minas Gerais.
- Defined distributed caching strategies with Redis for critical applications.
- Lead deployment and operation of applications on AWS and DigitalOcean.
- Build MCPs that automate internal processes, including automatic image identification.
- Lead the adoption of GitHub Copilot and AI-assisted development in the team, shortening feature delivery time across sprints.

Mid-level Full Stack Developer | Digifarmz (agtech) — 03/2021 – 04/2023

- Technical reference for the microservices architecture and RESTful APIs of a platform that monitors more than 500 thousand hectares of soy.
- Configured and maintained Kafka topics for asynchronous communication between distributed services.
- Rolled out CI/CD pipelines that cut rollbacks by 90% and raised release quality by 20%.
- Handled deployment, scaling and continuous production monitoring on AWS.

Backend Developer | Datacempro — 07/2017 – 01/2021

- Built and evolved critical modules of enterprise management systems in Java, JavaScript and PHP.

Backend Programmer | F1 Soluções — 10/2015 – 06/2017

- Built backend applications in Node.js and CakePHP and optimized high-performance MySQL databases.

Earlier experience (2007 – 2015): Spotcom (engineering team of 100+ people, external API integration), N2 Agência Web, Sygecom and Datacempro.

OTHER PROJECTS

AI Orchestrator (writing)

- Pipeline in Spring Boot (Java 17) and React that fetches news via RSS, writes and illustrates content with AI (Groq, Gemini, Mistral) and publishes automatically to a blog and LinkedIn.

EDUCATION AND LANGUAGES

- Associate degree in Systems Analysis and Development — UNIASSELVI (2025)
- Portuguese native · English A2 — advanced technical reading; conversation in development
- Immediately available · contractor (PJ) or employee (CLT)
